Native Starches

IFPC's Native Starches

IFPC's Native Starches provide thickening and cook-up properties, as well as binding, stabilizing, and moisture retention for traditional food applications.

These solutions offer cost savings while incorporating functional ingredients that are easily identified on a label and support consistent performance across a wide range of formulations.

Modified Starches

IFPC's Modified Starches deliver reliable textures and enhance stability for demanding food applications.

These solutions not only provide excellent water holding, act as effective thickening agents, and remain stable under acid shear, but they are also reliable and cost-efficient, making modified starches ideal for streamlining the processing of complex finished products.

Company Announcements

Earth Month

Sustainability is better when we work together.

IFPC celebrated Earth Day all month long and teamed up with our sister company, Green Field Solutions, to host an **Electronics Recycling Drive** and share **native seed pops** from The Green Center.

From responsibly recycling old electronics to encouraging new plant growth, we're proud to support initiatives that help our communities and the environment grow stronger, one step (and seed) at a time.

Bags Tournament Recap

Our **11th Annual Bags Tournament** delivered exactly what we love most: friendly competition, plenty of laughs, and time to connect outside the lab and office. Plus, a sweet surprise from the ice cream truck!

Congrats to our winners!

- 1st Place:** Alexa Teutrine and David Hillyard
- 2nd Place:** Holly Wiskamp and Sean Johnston
- 3rd Place:** Sheela Leonard and Huntley Leverenz

Events like this go beyond the scoreboard, they bring our team together, strengthen relationships, and reinforce that teamwork is at the core of everything we do at IFPC.

Modified vs. Native Starch: Selecting the Right Starch for Sauces & Dressings

Choosing the right starch is key to achieving the desired texture, stability, and processing performance. In sauces & dressings, starch influences attributes such as shine, thickness, and stability throughout processing.

Starch Fundamentals

Native starches provide reliable thickening in simple applications, but they can lose stability under heat, shear, or acidic conditions. Modified starches are designed to handle more demanding processes, maintaining viscosity, texture, and consistency throughout production and shelf life.

Applications in Sauces & Dressings

The right choice depends on your formulation goals. Native starches may support clean label positioning, while modified starches offer greater performance in complex systems such as dressings, dips, and shelf-stable sauces.

How to Choose the Right Starch Solution

IFPC partners with manufacturers to match the right starch solution to each application, balancing performance, label goals, and process requirements.

TEA
PARTY

Quarterly Milks: Tea Party

Put those pinkies up and welcome the charm of summer!

This quarter's milk prototype theme, Tea Party, is inspired by citrus and spice.

At IFPC, our IT&A team crafted four seasonal milk flavors that each emphasize unique flavor innovation. Become inspired by these tea party favorites that are both nostalgic yet refreshing: **Blueberry Muffin**, **Chai Tea**, **Cucumber Melon**, and **Orange Honey**.
